Mercedes SBC (Sensortronic Brake Control) Tool

- Handheld, user friendly, simple and easy to use
- Compatible with latest CAN vehicles
- Allows enable and disable of SBC system for safe pad and disk replacement
- Clear errors from the SBC system after carrying out repairs
- Updateable (return back to SP Diagnostics)

Overview

The new SP Diagnostics SBC tool has been created to allow you to service and replace brake pads and components used in the SBC systems which have been fitted on a number of Mercedes vehicles (W211 and R230) since MY2003.

The SBC system incorporates various systems which have previously been separate, ABS, ASR, BAS, ESP and ETS. The SBC system can be "woken up" by opening a door, operating the central locking, depressing the brakes, turning on the ignition or operating the park brake. When this occurs the system runs pre-checks which include a pressurisation of the braking system. If the brakes are either being worked on or are dismantled when these pre-checks occur it can lead to personal injury or damage to parts of the caliper and pad assembly. The SBC tool allows you to disable the system during service and repair work, thus allowing a safer working environment for the user.

Applications

Model Variant	Fuel Type	Model Year	Engine Size	
SL (230)				
Where Fitted				
Petrol / Diesel			All	03-06
E-Class (211)				
Where Fitted				
Petrol / Diesel				
All			03-06	
R-Class			Where Fitted	Petrol / Diesel
				All

Specification

Protocols:

- ISO
- CAN
- FT-CAN (Fault Tolerant)

Updates:

- Return to base

Display / Input:

- Simple LED indication of function
- 3 Button Control

Contents

- Reset Tool
- Instruction Sheet
